Machine Learning Methods and Applications

Week 1: Introduction to Machine Learning

© Mustafa Cavus, Ph.D.

Aim of the course

- Get to know the background of ML methods
- To experience hands-on application of ML
- No more what?, usually **why?**, and **so what?**

Playgrounds

Grading

- 3 homeworks (30%)
- A midterm exam (30%)
- Final project (40%)

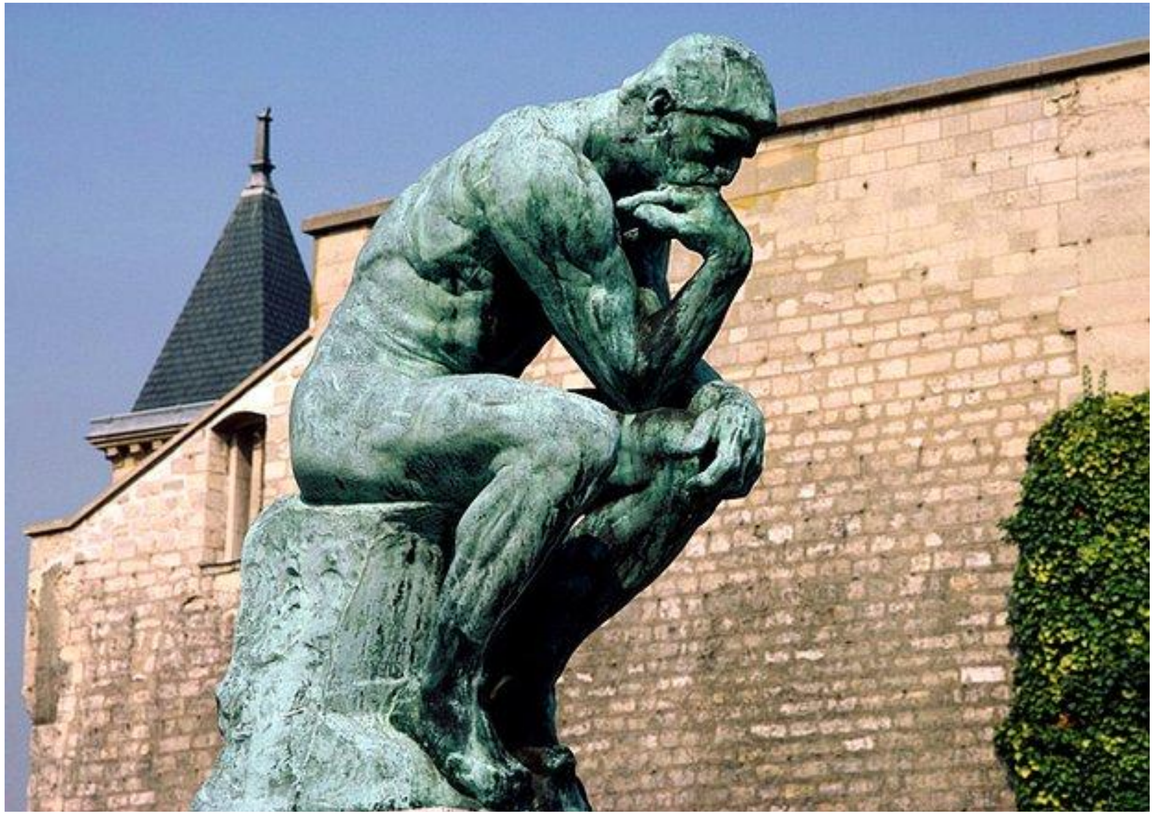
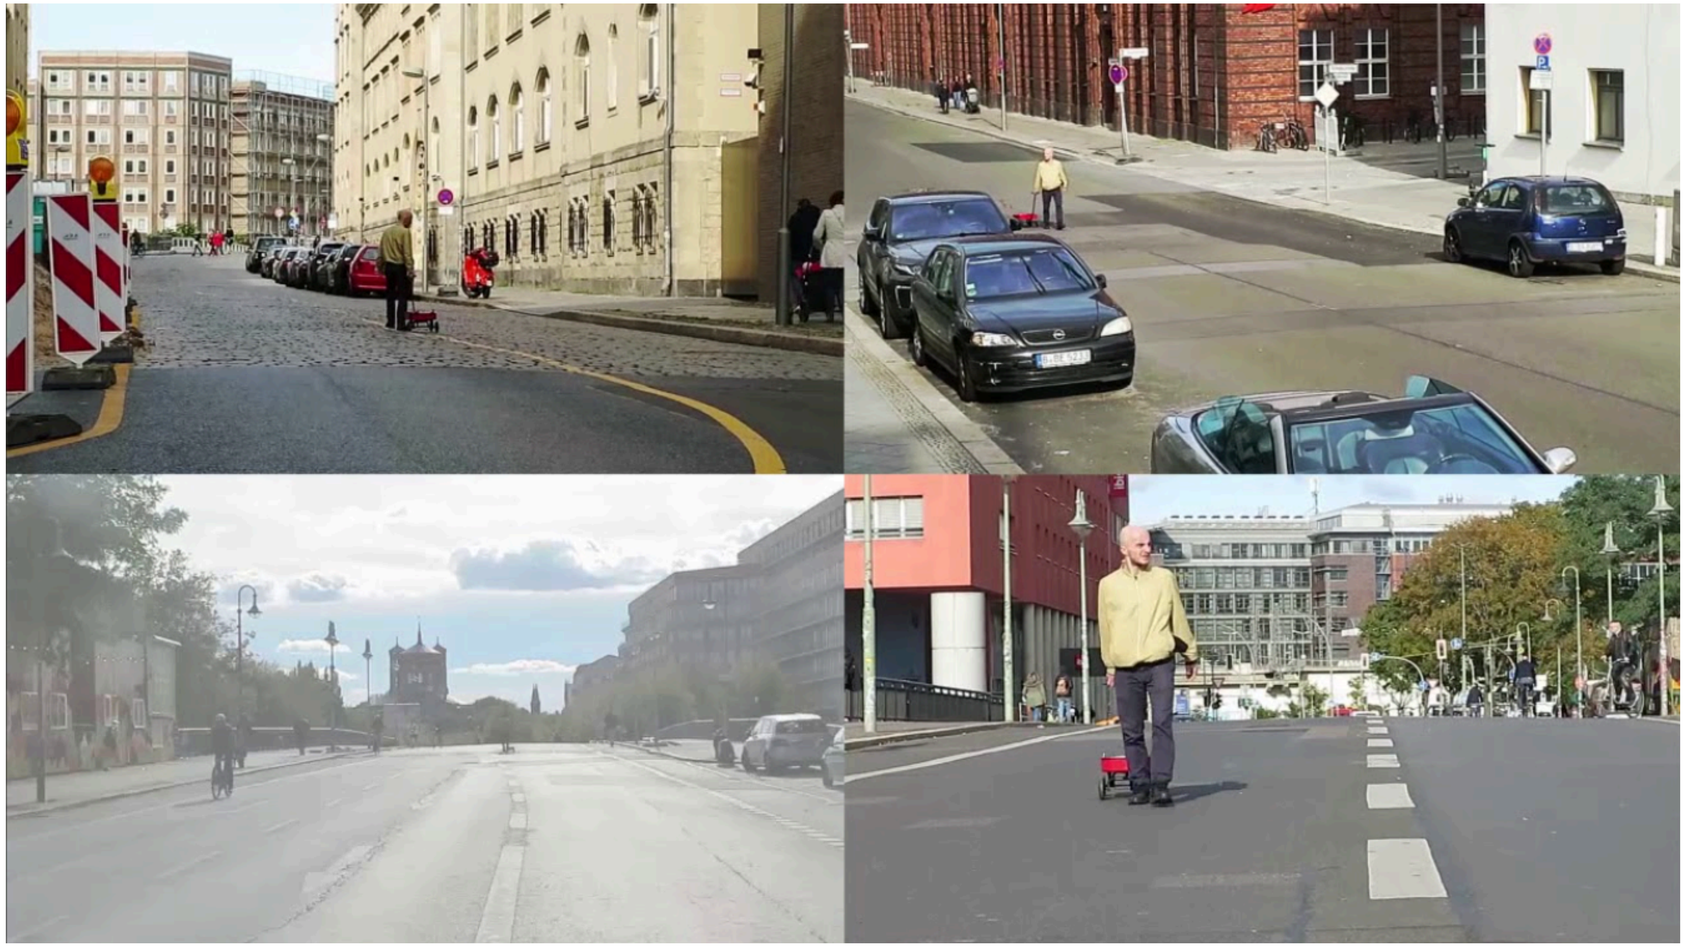
Introduction to ML



Le Penseur, Auguste Rodin (1840-1917)

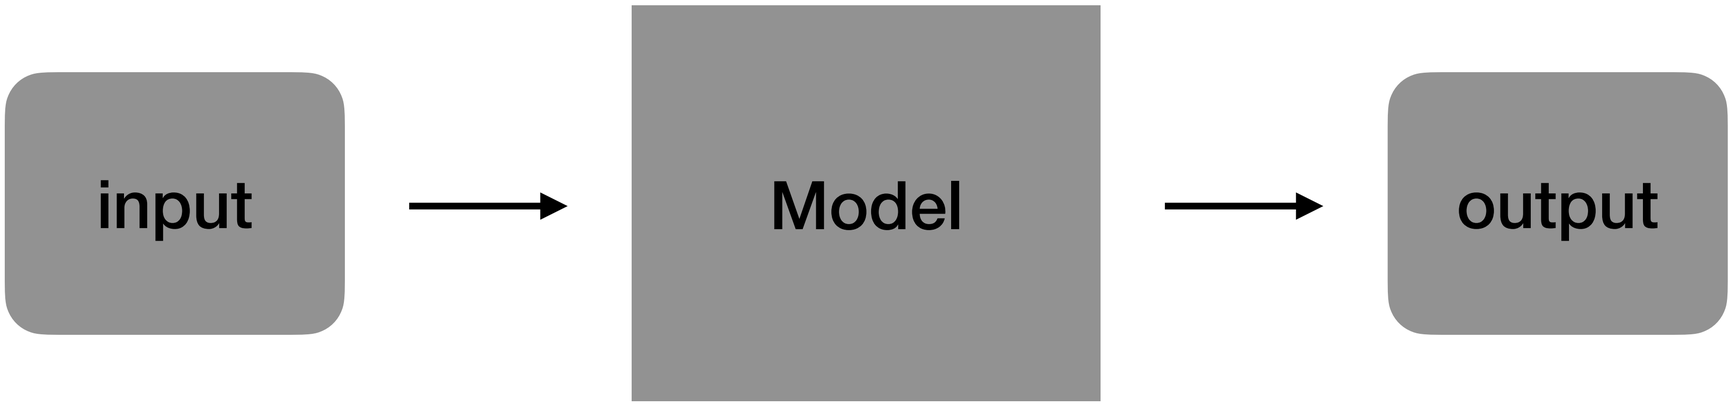
Introduction to ML



Introduction to ML

Introduction to ML

A basic learning process



Introduction to ML

Definitions

- A set of tools for **making predictions** from the data.
- **Intersection** of Statistics and Computer Science.
- Ability to learn from the data **without programmed**.
- **Learns patterns** from data and applies it to new data.
    - **Quality** of the process depends on the quality of the data.

Introduction to ML

Major branches

1. Supervised Learning
    - Regression
    - Classification
2. Unsupervised Learning
    - Clustering
3. …

Introduction to ML

Different perspectives

What is the difference between Statistics and Machine Learning?

Introduction to ML

Statistics

Major branches of Statistics

1. **Descriptive Statistics:** summarizing and visualizing data.
2. **Inferential Statistics:** estimation, hypothesis testing, predictive models.

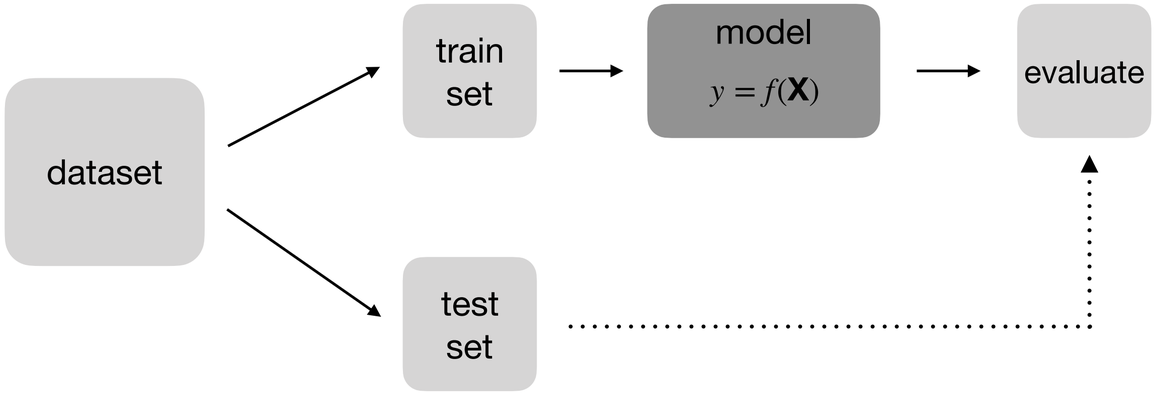
Introduction to ML

Difference

The major difference between machine learning and statistics is **their purpose**. Machine learning models are designed **to make the most accurate predictions** possible. Statistical models are designed for **inference about the relationships between variables**.

Introduction to ML

Workflow



Train set: data that model learn from

Test/validation set: new data to measure/validate the performance of the model

Introduction to ML

Difference(s)

Terminology		
	explanatory variable independent variable predictor covariate	input feature
	dependent variable response predicted variable	output target
	fit estimate	train
	observation	instance case
	coefficient	parameter

The of notes of today's lecture will be available on **GitHub**.
